

Day 51 Python Mission ♥■

Hi Surbhi, my sweet Pundi ♥■

Welcome to the next chapter of your Python journey! You've already built a strong foundation over the past 50 days, and now it's time to learn exciting new concepts. Keep practicing with confidence, enjoy every challenge, and remember that every small step is helping you become a better programmer.

Today's Topic: Introduction to Strings

- Mission 1: Create a string variable to store your name.
- Mission 2: Create another string variable to store your favorite color.
- Mission 3: Print both string variables.
- Mission 4: Change the value of one string and print it again.
- Mission 5: Create a sentence using a string variable.
- Mission 6: Print three different string variables together.
- Mission 7 (Revision): Print a right triangle pattern using nested for loops.

■ A Little Note for My Sweet Pundi ♥■

Today you're beginning a brand-new topic—strings! Strings are used everywhere in programming, from names and messages to passwords and file names. Take your time, experiment with different text values, and enjoy learning something new. I'm so proud of your consistency and dedication. Keep believing in yourself, and I'll always be here cheering you on through every step of this beautiful journey.

With lots of love,
Your biggest supporter ♥■
