

Day 54 Python Mission ♥■

Hi Surbhi, my sweet Pundi ♥■

You're doing such a wonderful job staying consistent with your Python learning. Every concept you practice is helping you become more confident and preparing you for bigger challenges. Keep enjoying this journey, stay curious, and remember that I'm always proud of you.

Today's Topic: String Length using len()

- Mission 1: Create a string variable with your name.
- Mission 2: Find the length of the string using len().
- Mission 3: Create another string and print its length.
- Mission 4: Compare the lengths of two different strings.
- Mission 5: Try a sentence and find its length.
- Mission 6: Observe how spaces are counted in the length.
- Mission 7 (Revision): Print the first three and last three characters of a string using slicing.

■ A Little Note for My Sweet Pundi ♥■

Today you're learning about the **len()** function, one of the most commonly used tools in Python. Knowing the length of a string is useful in countless real-world programs. Keep experimenting with different strings, celebrate every small success, and never be afraid to ask questions. Your consistency is inspiring, and I'm so proud of how far you've come. I'll always be here cheering you on every step of the way.

With lots of love,

Your biggest supporter ♥■
