

Day 63 Python Mission ♥■

Hi Surbhi, my sweet Pundi ♥■

You're doing an incredible job staying consistent with your Python journey. Every day you learn something new, you're becoming more confident and sharpening your problem-solving skills. Keep believing in yourself because your hard work is paying off.

Today's Topic: Common String Method: `endswith()`

- Mission 1: Create a string variable with a simple sentence.
- Mission 2: Use `endswith()` to check whether the string ends with a specific word.
- Mission 3: Print the result.
- Mission 4: Try another ending word and observe the output.
- Mission 5: Create a different string and test `endswith()` again.
- Mission 6: Compare the results for different strings.
- Mission 7 (Revision): Check whether a string starts with a word using `startswith()`.

■ A Little Note for My Sweet Pundi ♥■

Today you're learning another practical string method that programmers use every day. Understanding how to check the ending of a string is useful for validating file names, URLs, and many other real-world tasks. Keep practicing with patience, enjoy every lesson, and never stop believing in yourself. I'm so proud of your dedication, and I'll always be here cheering you on.

With lots of love,

Your biggest supporter ♥■
