

Day 68 Python Mission ♥■

Hi Surbhi, my sweet Pundi ♥■

You're making wonderful progress every single day. Your consistency is turning into real programming skills, and every concept you learn makes you more confident. Keep enjoying the journey and remember that every small step brings you closer to your dreams.

Today's Topic: Counting Vowels in a String using for Loop

- Mission 1: Create a string variable with a word or sentence.
- Mission 2: Create a counter variable with the value 0.
- Mission 3: Use a for loop to visit each character in the string.
- Mission 4: Check whether each character is a vowel (a, e, i, o, u).
- Mission 5: Increase the counter whenever a vowel is found.
- Mission 6: Print the total number of vowels.
- Mission 7 (Revision): Print each character of a string using a for loop.

■ A Little Note for My Sweet Pundi ♥■

Today you're combining strings, loops, and conditions to solve a real programming problem. That's a big step forward! Keep experimenting, don't be afraid of mistakes, and enjoy watching your logic grow stronger with every exercise. I'm incredibly proud of your dedication, and I'll always be here cheering you on through every milestone.

With lots of love,

Your biggest supporter ♥■
