

Day 9 Python Mission ♥

Hi Surbhi, my sweet Pundi ♥

I'm so proud that you've reached Day 9! Every day you spend learning is an investment in your future. Keep enjoying these tiny missions, stay curious, and never be afraid to ask questions. You're doing much better than you realize, and I'm always cheering for you.

Today's Topic: Type Conversion (`int()` and `str()`)

- Mission 1: Ask the user to enter their age.
- Mission 2: Store the entered age in a variable.
- Mission 3: Convert the age into an integer.
- Mission 4: Print the converted age.
- Mission 5: Create a number variable and convert it into a string.
- Mission 6: Print the converted string.
- Mission 7 (Revision): Ask the user to enter their favorite color and print it.

☐ A Little Note for My Sweet Pundi ♥

Nine days of consistency is something to be proud of. Every small lesson is making your foundation stronger, even if it doesn't always feel that way. Keep believing in yourself, enjoy the process, and remember that learning takes patience. I know you'll grow into a confident programmer one step at a time. I'll always be here, smiling at every milestone you achieve.

With lots of love,

Your biggest supporter ♥
