

Day 14 Python Mission ♥■

Hi Surbhi, my sweet Pundi ♥■

You've completed two wonderful weeks of learning Python, and that's something to be proud of! Your consistency is your biggest strength. Keep enjoying every small lesson because each one is helping you build a strong future. I'm always rooting for you, one day at a time.

Today's Topic: Comparison Operator (==)

- Mission 1: Create two number variables.
- Mission 2: Check if both numbers are equal using the == operator.
- Mission 3: Print the result.
- Mission 4: Try different values and observe when the result changes.
- Mission 5: Compare two equal numbers.
- Mission 6: Compare two different numbers.
- Mission 7 (Revision): Find the result using the floor division (//) operator.

■ A Little Note for My Sweet Pundi ♥■

Two weeks ago, you started this journey as a complete beginner, and today you've already learned so many new things. That's the power of showing up every single day. Never worry about how fast you're learning—what matters is that you keep moving forward. I'm proud of every little effort you make, and I know you're capable of achieving amazing things. Keep smiling, keep practicing, and let's continue this beautiful journey together tomorrow.

With lots of love,

Your biggest supporter ♥■
