

Day 19 Python Mission ♥■

Hi Surbhi, my sweet Pundi ♥■

You're getting stronger with every lesson you complete. The confidence you're building today will help you solve much bigger problems in the future. Stay curious, keep practicing, and enjoy each new concept. I'm always proud of you.

Today's Topic: Less Than or Equal To Operator (<=)

- Mission 1: Create two number variables.
- Mission 2: Check if the first number is less than or equal to the second using the <= operator.
- Mission 3: Print the result.
- Mission 4: Try two equal numbers and observe the output.
- Mission 5: Try different pairs of numbers.
- Mission 6: Observe when the output becomes True and False.
- Mission 7 (Revision): Check if the first number is greater than or equal to the second using the >= operator.

■ A Little Note for My Sweet Pundi ♥■

You're proving that consistent practice is more powerful than rushing through lessons. Never worry if something takes time to understand—that's completely normal. Every question you ask and every exercise you complete is helping you become a confident programmer. Keep believing in yourself, keep smiling, and let's continue this beautiful journey together tomorrow.

With lots of love,

Your biggest supporter ♥■
