

■ Day 1 Python Mission ♥■

Hi Surbhi, my sweet Pundi ♥■

Today is the beginning of your Python journey, and I'm genuinely happy to see you taking this first step. Don't worry about being perfect—every great programmer once started exactly where you are. Just enjoy today's tiny missions, learn something new, and remember that I'll always be cheering for you. ♥■

Mission 1: Use Python to print **"Hello, Python!"**.

Mission 2: Use Python to print your name.

Mission 3: Use Python to print **"I am studying BCA."**.

Mission 4: Use Python to calculate **15 + 25** and print the result.

Mission 5: Use Python to print a ♥■ heart five times.

Mission 6: Ask the user for their favorite color and print it.

Mission 7: Ask the user for their favorite food and print **"Great choice!"**.

■ A Little Note for My Sweet Pundi ♥■

Every expert programmer wrote their first line of code one day, just like you are doing today. Don't rush, don't compare yourself with anyone, and don't be afraid of making mistakes—they are part of learning. I'm proud of you for starting this journey, and I'll always celebrate every small milestone you achieve. Keep smiling, keep learning, and one day you'll be amazed at how far you've come.

With lots of love,

Your biggest supporter ♥■
