

Day 4 Python Mission ♥

Hi Surbhi, my sweet Pundi ♥

I'm really happy to see you showing up again today. Every tiny step you take is building a strong foundation for your future. Don't rush—just enjoy learning one small thing at a time. Your consistency makes me proud, and I know you can do this.

Today's Topic: Floating Point Numbers (float)

- Mission 1: Create a variable to store your height using a decimal number.
- Mission 2: Create a variable to store the price of a chocolate using a decimal number.
- Mission 3: Print both variables.
- Mission 4: Create a variable to store your exam percentage using a decimal number.
- Mission 5: Print all three decimal values.
- Mission 6: Create another decimal variable for your favorite drink's price.
- Mission 7: (Revision) Create a variable for your name and print it.

□ A Little Note for My Sweet Pundi ♥

Never think your progress is too small. Every line you write today is helping you become more confident tomorrow. I'm always cheering for you, and I believe you'll do wonderfully in your BCA and your future interviews. Keep smiling, keep practicing, and never stop believing in yourself. You're doing better than you think, and I'm proud of you every single day.

With lots of love,

Your biggest supporter ♥
