

Day 62 Python Mission ♥■

Hi Surbhi, my sweet Pundi ♥■

You're doing an amazing job staying consistent with your Python practice. Every new concept you learn is making you more comfortable with programming. Keep enjoying the journey, stay patient with yourself, and remember that every little effort is helping you grow stronger.

Today's Topic: Common String Method: `startswith()`

- Mission 1: Create a string variable with a simple sentence.
- Mission 2: Use `startswith()` to check whether the string starts with a specific word.
- Mission 3: Print the result.
- Mission 4: Try a different starting word and observe the output.
- Mission 5: Create another string and test `startswith()` again.
- Mission 6: Compare the results for two different strings.
- Mission 7 (Revision): Count how many times a word appears using `count()`.

■ A Little Note for My Sweet Pundi ♥■

Today you're learning another useful string method that helps check how text begins. Small concepts like this are used in many real-world Python programs, from validating user input to processing files. Keep practicing with confidence, celebrate every little improvement, and never stop believing in yourself. I'm incredibly proud of your dedication, and I'll always be here cheering you on every step of your journey.

With lots of love,

Your biggest supporter ♥■
