

Day 67 Python Mission ♥■

Hi Surbhi, my sweet Pundi ♥■

You're doing an incredible job staying committed to your Python journey. Every lesson you complete makes your foundation stronger and your confidence higher. Keep enjoying the learning process because every small step today is preparing you for amazing opportunities tomorrow.

Today's Topic: Iterating Through a String using for Loop

- Mission 1: Create a string variable with your name.
- Mission 2: Use a for loop to print each character.
- Mission 3: Print each character on a new line.
- Mission 4: Count how many characters are printed.
- Mission 5: Try the same program with a sentence.
- Mission 6: Observe how the loop visits each character one by one.
- Mission 7 (Revision): Check whether a word exists in a string using the in operator.

■ A Little Note for My Sweet Pundi ♥■

Today you're learning how to visit every character in a string one by one using a **for** loop. This is an important concept because it prepares you for text processing, searching, and many real-world programming tasks. Keep practicing with confidence, stay curious, and never stop believing in yourself. I'm so proud of your dedication, and I'll always be here cheering you on through every step of your journey.

With lots of love,

Your biggest supporter ♥■
