

Day 34 Python Mission ♥■

Hi Surbhi, my sweet Pundi ♥■

Your dedication is truly inspiring! Every day you learn something new, you're building a stronger foundation in Python. Keep enjoying this journey, stay patient with yourself, and remember that consistent practice is the secret to becoming a great programmer.

Today's Topic: Reverse Counting using range()

- Mission 1: Write a for loop to count backwards using range().
- Mission 2: Print numbers from 10 to 1.
- Mission 3: Change the starting number and observe the output.
- Mission 4: Change the ending number and observe the output.
- Mission 5: Use a different negative step value.
- Mission 6: Experiment with reverse counting using your own numbers.
- Mission 7 (Revision): Print even numbers using range() with a step value.

■ A Little Note for My Sweet Pundi ♥■

I'm so proud of how consistently you're showing up for yourself. Every little program you write is making you more confident and preparing you for bigger challenges ahead. Don't be afraid to make mistakes—they're proof that you're learning. Keep smiling, keep practicing, and keep believing in yourself. I'll always be here to support you on every step of this journey.

With lots of love,

Your biggest supporter ♥■
