

Day 42 Python Mission ♥■

Hi Surbhi, my sweet Pundi ♥■

Six weeks into your Python journey, and you're doing an incredible job! Your patience and consistency are helping you grow stronger every day. Keep enjoying the process, keep practicing with confidence, and always remember that I'm proud of every step you take.

Today's Topic: Sum of Numbers using while Loop

- Mission 1: Create a variable to store the sum.
- Mission 2: Create a counter variable starting from 1.
- Mission 3: Write a while loop to count up to 10.
- Mission 4: Add each number to the sum variable.
- Mission 5: Print the final sum.
- Mission 6: Change the ending number to 20 and observe the result.
- Mission 7 (Revision): Write a program to count down from 10 to 1 using a while loop.

■ A Little Note for My Sweet Pundi ♥■

Today you've completed six wonderful weeks of learning, and that's something worth celebrating. Every small exercise you finish is building your confidence and sharpening your logical thinking. Never be afraid to practice the same concept more than once—that's how real learning happens. Keep believing in yourself, keep smiling, and keep moving forward. I'll always be here cheering you on through every milestone.

With lots of love,

Your biggest supporter ♥■
