

Day 58 Python Mission ♥■

Hi Surbhi, my sweet Pundi ♥■

You're doing a wonderful job staying consistent with your Python journey. Every concept you learn is making you more confident and preparing you for bigger challenges. Keep enjoying the process, stay curious, and remember that every little step is helping you grow.

Today's Topic: Common String Methods: strip()

- Mission 1: Create a string with spaces before and after the text.
- Mission 2: Use strip() to remove the extra spaces.
- Mission 3: Print the original string.
- Mission 4: Print the cleaned string.
- Mission 5: Try strip() with another sentence.
- Mission 6: Observe the difference before and after using strip().
- Mission 7 (Revision): Convert a string to uppercase using upper().

■ A Little Note for My Sweet Pundi ♥■

Today you're learning another useful string method that programmers use every day. Cleaning extra spaces from text may seem like a tiny task, but it's very important when working with user input and real-world data. Keep practicing with confidence, celebrate every small success, and never stop believing in yourself. I'm incredibly proud of your dedication, and I'll always be here cheering you on.

With lots of love,

Your biggest supporter ♥■
